INTRODUCTION

The 4 days workshop was divided into two sessions, first session was on ROS (3/4/23 -4/4/23) and the second session was on ARDUINO (18/4/23-19/4/23).

The first day started by inauguration at 9 o'clock by the principal and HODs. Our principal gave an inspiring speech about technology and the need to remain updated in this fast changing world. The workshop began right after. We were educated on the basics of the Robotics Operating System and its impact on our careers and on the world, then we started installation of the software necessary for the working of ROS system. We learnt the basic commands and functions of the system.

The second days began with the familiarization of the components such as NODE MCU, development boards, etc. We then connected the components as per instructions given by the instructors for the working of system and in the end we created some interesting and indulging systems using ROS and hence the first session of the workshop concluded.

The third days marked the beginning of second session which was about ARDUINO, we were first familiarized with the components such as the Arduino board, sensors, etc. We continued throughout the day making a variety of projects which made us get used to the development process.

The fourth and final day began with us being handed components for making a robot. We tinkered through the days coming up with and making a prototype of a robot and in the end our hard work was fruitful. Hence the final day concluded with us creating our own robots and we left with knowledge that will help us much in our future endeavors.

The workshop was an eye opening experience for many of us who were much ignorant to the latest developments in robotics and helped us to forge our paths going forward.
